Coding & Solution

Date	06 July 2026
Team ID	
Project Name	AI-Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/TanmayiMuvvala/AI-Powered-Debt-Relief-Financial-Recovery-Platform
Programming Language(s)	Python, JavaScript, HTML, CSS
Framework(s) Used	FastAPI, React.js (Vite), Google Gemini AI, SQLite
Key Features Implemented	User Authentication, Loan Management, Financial Health Analysis, Settlement Recommendations, AI Negotiation, AI-Generated Settlement Letters, AI History Dashboard
Pending / Incomplete Features	Mobile Application, Cloud Deployment, Banking API Integration, Credit Score Analysis, Multilingual Support
Setup / Run Instructions	1. Clone the repository. 2. Install backend dependencies using pip install -r requirements.txt. 3. Install frontend dependencies using npm install. 4. Configure the .env file with the Gemini API key. 5. Start the backend using uvicorn app.main:app --reload. 6. Start the frontend using npm run dev.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:
The project follows a modular architecture with separate frontend and backend components, making the codebase easy to maintain and extend. React.js is used for the user interface, FastAPI manages backend services and APIs, SQLite handles data storage, and Google Gemini AI powers intelligent settlement recommendations, financial advice, and negotiation content. Version control is maintained through GitHub, ensuring collaborative development and efficient code management.
