Maximum Marks	3 Marks

Project Executable Files

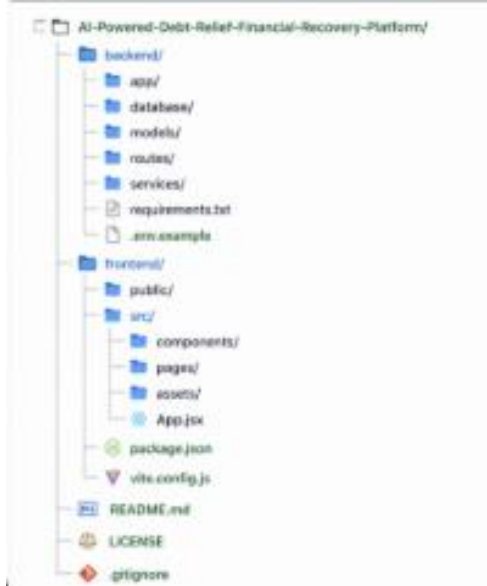

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	NA
Login Credentials (Demo)	Email: demo@gmail.com Password: demo123
Platform / Hosting Provider	Render / Local Server
Repository Link	https://github.com/TanmayiMuvvala/AI-Powered-Debt-Relief-Financial-Recovery-Platform
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

- Python 3.11+
- Node.js 18+
- npm
- Git
- SQLite
- Google Gemini API Key

Step 1: Clone the Repository: git clone < <https://github.com/TanmayiMuvvala/AI-Powered-Debt-Relief-Financial-Recovery-Platform> >

Step 2: Navigate to the Backend Folder: cd backend

Step 3: Install Backend Dependencies: pip install -r requirements.txt

Step 4: Configure the Environment

Create a .env file inside the **backend** folder and add your Google Gemini API Key.

Step 5: Start the Backend Server : uvicorn app.main:app --reload

Step 6: Open a New Terminal and Navigate to the Frontend Folder: cd frontend

Step 7: Install Frontend Dependencies: npm install

Step 8: Start the React Application: npm run dev

Step 9: Open the Application

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI response depends on internet connectivity.	Ensure stable internet connection.
2	Requires a valid Google Gemini API Key.	Configure the API key in the .env file.
3	SQLite is suitable for development but not large-scale production.	Use MySQL or PostgreSQL for production deployment.
